

### **automatic pressure filters c pdf**

The Larox C Series filter is the latest version of the well-proven Larox automatic pressure filter (horizontal plate type) with over 900 installations worldwide. It offers the ability to dewater and wash fine and difficult to dewater solids in high volumes, producing very high purity, dry filter cakes all in a fully automatic mode.

semi-automatic operation by adding simple turn-of-a-handle cleaning mechanism to the filter's screen. Upgrading a manual filter to semi-automatic operation eliminates the need for turning-off the water and extracting the filter screen for rinsing, with the semi-automatic assembly the process flow is not interrupted during operation.

Due to the corrosiveness of the slurry, which is supersaturated with chloride salts (up to 300,000-ppm), the filter chambers were constructed of C-276 alloy. Due to the high temperature of the slurry, 110 o C, no rubber or synthetic components are used inside the filter chamber. Read more about the first Pneumapress filters.

particles to go straight through the filter. When using pressure filters for iron and manganese removal, the operator must regularly measure the iron and manganese concentration of the filter effluent and backwash the filter before breakthrough occurs. Because of these limitations, pressure filters must not be used to treat surface water.

the automatic ones: robustness, extreme reliability and a small footprint. Features

- Robust triple layer filter mesh
- Filter mesh glued into a support frame of perforated stainless steel
- Pressure drop indicator with high-pressure alarm
- Small footprint
- Simple installation and operation

The 150 m<sup>2</sup> filters have 24 1.5m x 4.0m plates each with a chamber depth of 60 mm and total volume of over 8 m<sup>3</sup>. The Ancillaries. The major ancillary required for an Automatic Pressure Filter station is a pump that will inflate the backside of the chambers' diaphragms to the squeezing pressure of 16 bar.
