A junction, in the context of rail transport, is a place at which two or more rail routes converge or diverge. This implies a physical connection between the tracks of the two routes (assuming they are of the same gauge), provided by points (US: switches) and signalling. Junctions are important for rail systems, their installation into a rail system can reduce route capacity, and have a ...

Junction (rail) - Wikipedia

Friction Drive & Gear Drive These terms refer to methods of controlling the traction system of the machine. There are 2 general styles used in different combinations by various manufacturers over the years.
