Fuzzy logic is a form of many-valued logic in which the truth values of variables may be any real number between 0 and 1 inclusive. It is employed to handle the concept of partial truth, where the truth value may range between completely true and completely false. By contrast, in Boolean logic, the truth values of variables may only be the integer values 0 or 1.

A fuzzy control system is a control system based on fuzzy logic—a mathematical system that analyzes analog input values in terms of logical variables that take on continuous values between 0 and 1, in contrast to classical or digital logic, which operates on discrete values of either 1 or 0 (true or false, respectively).

Since its launching in 1978, the journal Fuzzy Sets and Systems has been devoted to the international advancement of the theory and application of fuzzy sets and systems. The theory of fuzzy sets now encompasses a well organized corpus of basic notions including (and not restricted to) aggregation operations, a generalized theory of relations, specific measures of information content, a ...

The classroom activity articles described and linked to this page were developed by The Space Place staff. They have all been published in past issues of the International Technology and Engineering Educator's Association's (ITEEA) journal The Technology Teacher.. We are now making them available in Adobe Acrobat (.pdf) format so that all teachers may use them.

If the intent is to import from an electronically submitted form, I have used Adobe LifeCycle Designer to accomplish this very thing. Basically you can create an XML output of the PDF form data using an email client of the end users choice and have the data from the XML file read from the inbox into the fields of your MS Access database.

La logique floue (fuzzy logic, en anglais) est une logique multi-valuée où les valeurs de vérité des variables - au lieu d'être vrai ou faux - sont des réels entre 0 et 1. En ce sens, elle étend la logique booléenne classique avec des valeurs de vérité partielles [1]. Elle consiste à tenir compte de divers facteurs numériques pour aboutir à une décision qu'on souhaite acceptable.

LogicT - backtracking monad transformer with fair operations and pruning [The Abstract of the paper] We design and implement a library for adding backtracking computations to any Haskell monad. Inspired by logic programming, our library provides, in addition to the operations required by the MonadPlus interface, constructs for fair disjunctions, fair conjunctions, conditionals, pruning, and an ...
