The International Linear Collider (ILC) is a proposed linear particle accelerator. It is planned to have a collision energy of 500 GeV initially, with the possibility for a later upgrade to 1000 GeV (1 TeV). Although early proposed locations for the ILC were Japan, Europe and the USA (), the Kitakami highland, in the Iwate prefecture of northern Japan, has been the focus of ILC design efforts ...

* CERN has predicted that micro black holes might be created by the Large Hadron Collider at a rate of 1 per second, however most scientists agree that scientists do not know if micro black holes will in fact be created. Of the small number of scientists who studied this issue in depth, a few have publicly expressed concern that if micro black holes or strange matter are created at rest on ...
