SAM is an interdisciplinary peer-reviewed journal consolidating research activities in all experimental and theoretical aspects of advanced materials in the fields of science, engineering and medicine including synthesis, fabrication, processing, spectroscopic characterization, physical properties, and applications of all kinds of inorganic and organic materials, metals, semiconductors ...

Science of Advanced Materials

The aim of the journal is to publish papers that advance the field of computational materials science through the application of modern computational methods alone or in conjunction with experimental techniques to investigate existing inorganic and organic materials as well as to discover new materials.

Materials Science in Semiconductor Processing provides a unique forum for the discussion of novel processing, applications and theoretical studies of functional materials and devices for (opto)electronics, sensors, detectors, biotechnology and green energy. Each issue will aim to provide a snapshot of current insights, new achievements, breakthroughs and future trends in such diverse fields as ...

Materials Science in Semiconductor Processing

Science and Technology of Advanced Materials is the leading open access, international journal covering a broad spectrum of materials science research including functional materials, synthesis and processing, theoretical analyses, characterization and properties of materials. Emphasis is placed on the interdisciplinary nature of materials science and issues at the forefront of the field, such ...

International Journal of Materials Science and Applications (IJMSA) is an interdisciplinary journal devoted to experimental and theoretical research on the synthesis, structure, properties and applications of materials. Particular interest is placed on materials having relevance to microelectronics, photonics and micromachining. IJMSA welcomes the following tier 1 article types: Book Review ...

Martindale's Calculators On-Line Center: Materials

Advances in Materials (AM) publishes reviews, full-length papers, and short communications recording original research results on, or techniques for studying the relationship between structure, properties, and uses of materials. The subjects are seen from international and interdisciplinary perspectives covering areas including metals, ceramics, glasses, polymers, electrical materials ...

Ductility is especially important in metalworking, as materials that crack, break or shatter under stress cannot be manipulated using metal-forming processes such as hammering, rolling, drawing or extruding. Malleable materials can be formed cold using stamping or pressing, whereas brittle materials may be cast or thermoformed.. High degrees of ductility occur due to metallic bonds, which are ...

The reconfiguration of DNA-linked substrate-supported nanoparticle assemblies in response to ethanol added to the aqueous solution is studied using in situ atomic force microscopy. In situ imaging directly shows the changes to the monolayer superlattice during ethanol-induced contraction and expansion.

THE PROPERTIES OF MATERIALS and their everyday uses

A microtome (from the Greek mikros, meaning "small", and temnein, meaning "to cut") is a tool used to cut extremely thin slices of material, known as sections. Important in science, microtomes are used in microscopy, allowing for the preparation of samples for observation under transmitted light or electron radiation. Microtomes use steel, glass, or diamond blades depending upon the specimen ...

Ferroelectric bilayers are leveraged in concert with a metasurface to create tunable infrared devices possessing high-speed, low-power and latchable switching (see article number 1800862 by Thomas E. Beechem and co-workers). Together, these characteristics highlight the potential of ferroelectrics for dynamic infrared elements while also emphasizing the general utility of leveraging phonons to ...
