In Factors from Scratch, we showed that value investing works through a re-rating process. The process begins when the market develops an expectation that the earnings of certain companies will decline or grow at depressed rates into the future. 1 The market then prices those companies at a discount relative to their current earnings, turning them into "value stocks."

The anti-double stranded DNA (anti-dsDNA) test is used to help diagnose lupus (systemic lupus erythematosus, SLE) in a person who has a positive result on a test for antinuclear antibody (ANA) and has clinical signs and symptoms that suggest lupus.. Typically, an ANA test is the first test performed to evaluate an individual for an autoimmune disorder.
