

### **properties of interacting low pdf**

Weakly interacting massive particles (WIMPs) are hypothetical particles that are thought to constitute dark matter. There exists no clear definition of a WIMP, but broadly, a WIMP is a new elementary particle which interacts via gravity and any other force (or forces), potentially not part of the standard model itself, which is as weak as or weaker than the weak nuclear force, but also non ...

A Bose-Einstein condensate (BEC) is a state of matter of a dilute gas of bosons cooled to temperatures very close to absolute zero (-273.15 °C). Under such conditions, a large fraction of bosons occupy the lowest quantum state, at which point microscopic quantum phenomena, particularly wavefunction interference, become apparent macroscopically. A BEC is formed by cooling a gas of extremely ...

Highlights We introduce an improved workflow for systematic gas shale characterization. A suite of shales from a number of sedimentary basins around the world. Petrophysics using XRD, XRF, CEC, SSA often correlate with geomechanical properties. Permeability can be determined using Mercury Injection Capillary Pressure (MICP). SEM and X-ray CT imaging provide additional correlating parameters.

Chitin, poly( $\beta$ -1 $\rightarrow$ 4)-N-acetyl-d-glucosamine), is a natural polysaccharide of major importance, first identified in 1884 (). This biopolymer is synthesized by an enormous number of living organisms; and considering the amount of chitin produced annually in the world, it is the most abundant polymer after cellulose.
